GET LUCKY GOLF × GLOBAL MARKET SCENARIOS

Market potential & revenue scenarios · August 2026

The thesis in one line. The plan to the 2032 exit needs 22,886 subscribers; golf has 160 million players. That is ~2% of the company's own four-region scenario, with the three-year milestone at just 9,720. Simulators are the fourth rung of the model and are carried in the forecast; golf travel remains entirely uncounted.

The market in four numbers

160M+ golfers worldwide	112.2M adults and juniors outside the US & Mexico[1] plus 48.1M in the US[2]
38,000+ courses	Across 206 of the world's 251 countries[3] — every par-3 a potential Get Lucky hole. Key markets: UK 3,101 · Germany 1,050 · France 804 courses[3]
$1.2bn insurance layer	Hole-in-one / prize-indemnity insurance today, projected to $2.4bn by 2033 (8.1% CAGR)[4] — with no consumer brand on top of it
1 in 12,500	Amateur odds of a hole-in-one[5] — every attempt worth paying for, every prize insurable

From market to plan

Funnel step	Size
Golfers worldwide (incl. US)	**160M+**
Company scenario — four launch regions (US, EU, SA, JP)	**~950,000 subscribers**
Scenario revenue potential across those regions	**$21m+ / year**
The plan to the 2032 exit	**22,886 subscribers (~2%)**
The 3-year milestone	**9,720 subscribers (~1%)**

Revenue scenarios — from the pro forma workbook

The model slows growth deliberately (10.5% → 8% → 7% monthly, churn held at 4%) and excludes prize payouts throughout — that risk is carried by Santam (Authorised FSP 3416).

	2026	2029 — 3-year plan	2032 — exit vision
Subscribers	~2,130	~9,720	~22,886
Courses & app subscription	R11.2m ($605k)	R35.3m ($1.91m)	R83.0m ($4.49m)
Simulators (live 2027)	—	R12.0m ($649k)	R32.0m ($1.73m)
Territory sponsorship	—	R2.0m ($108k)	R9.0m ($486k)
In-play upsells	—	R4.3m ($232k)	R10.5m ($569k)
Total revenue	**R11.2m**	**R53.6m** ($2.89m)	**R134.6m** ($7.27m)
Annual operating cost	R5.4m	R15.2m	R27.1m
EBITDA margin	−6.3%	15.5%	23.9%
Revenue multiple applied	4.77× (implied)	**2.50×**	**2.50×**
Valuation milestone	R53.3m (this round)	R133.9m (2.51×)	R336m (6.3×)

Every forward milestone is struck at a flat 2.5× revenue — roughly half the bottom of the 5–10× band engaged-community comparables trade at (Strava, Peloton, Whoop), discounted for being private and pre-scale; the round itself implies 4.77×, so the multiple compresses as the company scales. Revenue is reported by stream throughout so the composition of the business is legible at every milestone. FX 18.5. Full monthly build in the pro forma workbook; the simulator adoption range is in the simulator document.

Revenue stream 4 — In-play upsells: the menu after the yes

LAUNCHING 2027 — BUILT WITH THE APP, FUNDED BY THIS ROUND

A golfer standing over the ball, having already paid, is the most willing buyer in sport. The upsell menu appears **after** the entry, never before it, so it lifts every other stream without touching conversion on any of them.

Upsell	Price	What it does
Jackpot upgrade	$100	Trade up mid-round to a shot at a **$100,000** insured prize instead of the standard pot.
Double up	$5	Doubles the prize if the shot goes in. The cheapest yes on the menu and the highest attach.
Three for two	2× entry	Three swings for the price of two. More attempts per visit, same prize exposure.
Nearest the pin	$3	A guaranteed prize inside three feet — monetising the 12,499 shots in 12,500 that are not an ace, and the single biggest lever on perceived value.
The highlight reel	$3	The produced clip, scored and branded, ready to post. No insurance component: pure margin, and every share is marketing.
The group pot	$10 a head	A fourball buys in, closest to the pin takes the pot, Get Lucky takes a fee. Turns one purchase into four.

Modelled at **12% attach on course and app attempts at $5 average**, and 5% at $2 inside simulators where the base entry is a dollar. Get Lucky nets 55% after course or operator share and insurance, at a 65% EBITDA margin. Upsells attach to attempts **already in the model** — they never create new volume, so there is no double-count with the other streams. **R4.3m by 2029, R10.5m by 2032.**

Revenue stream 3 — Territory sponsorship: the deal we already signed

SOUTH AFRICA CONTRACTED — REPEATED AT EACH MARKET ENTRY

Sponsorship is the one line in this plan that was signed rather than forecast. **Santam committed R9m over three years** (R2.5m → R3.0m → R3.5m) to be attached to the product in South Africa — a market of roughly 150,000 golfers. The logic is structural: the insurer who underwrites the prize is the natural sponsor of it. That is why the deal was signable in a small market, and why it repeats in large ones.

Territory	Anchor partner	From	2029	2032
South Africa	Santam (Authorised FSP 3416) — **contracted**	Live	R9m over three years, inside the courses & app stream	
United States	Anchor insurer partner — appointed at entry	2029	R2.0m	R4.0m
Europe	Anchor insurer partner — appointed at entry	2030	—	R3.0m
Japan	Anchor insurer partner — appointed at entry	2031	—	R2.0m
In the plan			**R2.0m**	**R9.0m**

Every new-territory figure is set *below* the South African run-rate at entry, in markets many times its size — sponsorship is negotiated and lumpy, and a linear scale off golfer counts would produce numbers no sponsor would sign. New-territory partners are appointed as each market opens and are not yet in place. Live inputs on the Sponsorship tab of the pro forma workbook.

Growth engine 1 — Golf travel: the download engine

IN DEVELOPMENT — NOT YET CONTRACTED

An ace on tour refunds the whole trip, insured. Operators pay ~$1 per booked golfer to offer it — and every travelling golfer installs the app to play.

Golf tourism market	~$28bn (2025), projected to ~$62bn by 2034[6]
Travelling golfers	12M+ Americans travelled to play golf in each year 2022–2025[7]; Golfbreaks alone sends ~220,000 golfers a year[8]
Year-1 target	**200,000+ app installs** (company target)

The $1 fee is not the prize — **distribution is**. Every install is a golfer one tap from the $10/month global subscription; the travel hook is a funnel, not a revenue line.

Revenue stream 4 — Simulators: the global multiplier

LAUNCHING 2027 — FUNDED BY THIS ROUND

A $1 in-sim challenge for a $1,000 insured prize, built into the operator's software. No hardware, no cameras, no installation — the sim itself is the verifier. It is the fourth rung of the model and carries **R12.0m of revenue by 2029 and R32.0m by 2032** — roughly a quarter of group revenue on 1.5% of a single country. Travel and cross-sport remain excluded.

Global simulator market	~$2.4bn (2025), projected to ~$4.8bn by 2035[9]
South Korea alone	~94M simulator rounds a year[10]; a $1.6bn screen-golf industry across ~9,000 venues[11]
United States	19M Americans played exclusively off-course (simulators, ranges, golf entertainment) in 2025[2]
Leading operators	Golfzon (6,500+ venues, ~60% of the commercial market[12]) · Trackman · Full Swing · Foresight Sports · X-Golf · Topgolf Swing Suite · Kakao VX

How the revenue is built

Unit	$1 entry · $1,000 insured prize · split **46 / 30 / 24** (Get Lucky / operator / insurer). The operator takes more than a course's 10% because it brings the venues, the software and the distribution — Get Lucky installs no hardware.
Volume basis	Attach rate against **South Korea's ~94M annual simulator rounds alone**[10]. Golfzon's venues outside Korea and every other operator listed above are excluded.
Ramp	2026 integration year (no revenue) · 0.3% (2027) · 0.8% (2028) · **1.5% (2029)** · 4.0% (2032)
Revenue to Get Lucky	R2.4m (2027) · R6.4m (2028) · **R12.0m (2029)** · R32.0m (2032), at ~50% EBITDA margin — software-only
Funding	20% of the R8.0m raise (~R1.6m) is allocated to the integration work this channel requires

Adoption range — the 2029 milestone at three attach rates

Attach rate	Simulator revenue	Total revenue	Valuation (2.74×)	Investor multiple
0.5% — conservative	R4.0m	R44.6m	R111.5m	2.09×
1.5% — the plan	R12.0m	R53.6m	R133.9m	**2.51×**
3.0% — strong adoption	R24.0m	R67.0m	R167.5m	3.14×

Investor multiple measured on the R53.3m post-money of this round. Simulator revenue depends on concluding operator agreements, which are not yet signed.

The Ernie route to market. Ernie Els has direct relationships with the operators on that list and opens the door himself — his standing in the game, his course-design network and The Els Club venues reach people an unknown start-up cannot. That is direct access, not a contract, and the model treats it as such.
