Get Lucky Investor FAQ

What is your commercial traction to date?

Get Lucky Golf has moved from launch to meaningful commercial scale within its first 6 months of operation (July–December 2025).

Financial traction

- Capital invested: R3.0 million
- Total turnover: R3.1 million
    - R2.5 million in sponsorship revenue
    - R600,000 in direct player entry revenue
- Revenue momentum: Monthly revenue grew from R10,000 in July to R250,000 in December, demonstrating strong early adoption and accelerating demand.

Assets & national footprint

- Approximately R1.0 million in proprietary camera and installation assets
- 20 permanent installations across South Africa
- Live at leading, premium golf courses nationwide, providing high-quality, repeat player exposure

Contracted revenue

- Santam – signed 3-year sponsorship agreement worth R9 million
    - Year 1: R2.5m
    - Year 2: R3.0m
    - Year 3: R3.5m

This combination of real revenue, contracted future income, owned assets, and national distribution positions Get Lucky Golf as an early-stage business with unusually strong proof-of-execution.

How does your partnership with golf courses work?

We partner directly with golf courses on an exclusive, long-term basis. Each course receives a 10% revenue share on every paid entry, creating a recurring, performance-linked income stream with no upfront cost to the club.

Our agreements are structured as 2-year auto-renewing partnerships, giving both parties continuity and predictability. To protect the integrity of the platform and the value of building the partnership, the contracts include a 2 year restraint of trade on the course.

Get Lucky covers all installation, insurance, technology, and operational execution, making it a low-risk, high-upside partnership for courses and a defensible, scalable distribution channel for the business.

Why do you typically install only one hole per club?

We generally install the Get Lucky Hole-in-One Challenge on the signature par-3 at each course. This concentrates player attention on a single, high-visibility hole, maximising participation, operational efficiency, and brand impact.

That said, the model is deliberately flexible. Where a course has multiple high-traffic par-3s or strong event demand, we are very open to installing multiple challenge holes by agreement. For example, we currently operate two live challenge holes at both The Metropolitan Golf Club and Boschenmeer Golf Club.

This approach allows us to optimise yield per course while retaining clear upside through multi-hole expansions as engagement and revenue scale.

How does Get Lucky Golf navigate gambling regulation?

Get Lucky Golf is structured as a purely skill-based competition, not a game of chance. Players are entering a hole-in-one challenge, where the outcome is determined entirely by golfing skill, under standard competition rules.

Because there is no randomness, wagering, or odds-based payout, entries are treated as competition entries rather than gambling, placing the model outside traditional gambling regulation. All prizes are fully insured and pre-funded, with clear terms and verification protocols in place.

While the experience carries the emotional excitement of a high-stakes moment, it does so without gambling mechanics or regulatory complexity, allowing us to operate cleanly, transparently, and at scale.

What does the competitive landscape look like?

Get Lucky Golf operates in a largely uncontested category. An always-on, permanently installed hole-in-one activation of this nature is a world first originating from South Africa.

At launch, the only meaningful local competitor was acquired by us and fully rebranded into Get Lucky, effectively consolidating the domestic market from day one. This has allowed us to establish early category leadership, exclusive course relationships, and operational know-how before international copycats emerge.

Globally, hole-in-one offerings are typically event-based, manual, or promotional one-offs, rather than a scalable, technology-enabled platform. This creates a significant first-mover advantage.

Our strategy to stay ahead is focused on speed of rollout, locked-in course partnerships, and proprietary technology, including the WhatsApp-native player journey referenced below, which dramatically lowers friction, increases conversion, and makes replication materially harder.

In short, the opportunity is global and time-sensitive – and the current market structure strongly favours rapid scaling by the first credible platform.

The deck references two entry models. How do they work together?

Get Lucky Golf is built on two complementary entry models, designed to work in tandem – one to anchor the brand and defensibly own premium courses, and the other to unlock global, asset-light scale.

1. Premium Course Installation Model (Current Core Model)

This is our flagship model and the foundation of the brand.

We install the Get Lucky Hole-in-One Challenge on the signature par-3 at premium golf courses, using dual camera verification and a physical entry board. These locations act as high-visibility brand billboards, building trust, legitimacy, and awareness among serious golfers.

- Designed for top-tier, high-traffic courses
- Higher upfront installation cost (owned camera assets)
- 10% revenue share with the club
- Fully insured, permanently installed, always-on
- Anchors long-term, exclusive course partnerships

This model establishes Get Lucky as the category leader and creates defensible, contracted distribution in key golf markets.

2. Phone-Based Global Model (Scalable Expansion Model)

The second model is built for speed, reach, and global scalability.

Here, the entire challenge runs on the golfer's phone, with players educated and activated through off-course marketing channels such as YouTube golfers, social media, and digital partnerships. This allows any par-3, anywhere in the world, to become a Get Lucky challenge.

- No physical installation cost
- No revenue share with clubs
- Asset-light and highly scalable
- Enables rapid international expansion
- Designed for mass participation and long-tail courses

How they work together

The installed course model builds brand, trust, and credibility in premium environments. The phone-based model leverages that brand to scale globally, without the capital or operational constraints of physical installs.

In effect:

- Premium installs create legitimacy and defensibility
- Phone-based entries create exponential reach and margin expansion

Together, they allow Get Lucky to move from a course-anchored platform to a global, golfer-owned network, while maintaining brand quality at the top end and scale at the bottom.

What are the hurdles to clubs signing up?

Initially, we expected two main challenges:

- Slow decision-making due to committee-led governance structures
- Resistance to on-course branding, particularly at premium clubs

In practice, the reality has been far more positive.

Golf course general managers are under increasing pressure to keep members engaged, modernise the club experience, and unlock new, non-intrusive revenue streams. As a result, clubs have been highly receptive and have moved faster than anticipated.

The Get Lucky model addresses these needs directly:

- No upfront cost to the club
- Incremental, performance-based revenue
- Minimal operational burden
- High member excitement without disrupting traditional golf culture

This alignment has resulted in shorter sales cycles and strong inbound interest, reinforcing the scalability of our course partnership strategy.

What are the hurdles to golfers entering the challenge?

The primary barrier is confidence, not interest. Certain segments – particularly older golfers and many female players – are less likely to believe they can make a hole-in-one and are therefore more hesitant to pay to enter.

We addressed this by reducing perceived downside without diluting excitement.

On promotional days, we introduced a money-back guarantee if the golfer hits the green. This reframes the decision from “risking money” to “backing a realistic outcome”. The impact has been material:

- Entries increase by ~100% on promotional days
- Approximately 25% of entrants hit the green, validating the structure and economics

To further ensure every entry feels rewarding, we also added an instant participation incentive. On promotional days, each entrant receives a complimentary shot of Shanky’s Whip, meaning every swing is rewarded regardless of outcome.

This activation is fully sponsored:

- Shanky’s Whip has committed 1,800 bottles for 2025,
- representing a R900,000 sponsorship value.

The result is a model that broadens participation, improves conversion across demographics, and increases total entries, while maintaining the emotional peak of the hole-in-one moment.

How are you streamlining the entry process to make it less time-consuming?

We treat conversion friction as a core product risk, and we iterate on it continuously. Today, we are already optimising the entry form and payment flow to reduce time-to-entry and drop-off at the point of purchase.

The next major step is the launch of our WhatsApp-native entry platform, which moves the experience from forms to conversational, chat-based entry. This mirrors how golfers already communicate and transact daily.

Key improvements include:

- One-tap re-entry once a golfer has entered before

- Securely stored contact details and payment credentials
- No repeated form-filling across rounds or courses
- Faster entry at the tee, improving throughput and uptake

Over time, this creates a persistent golfer profile, enabling auto-entry, repeat participation, and personalised offers – while materially increasing conversion and lifetime value.

In short, we're shifting from a transactional form to a relationship-based entry system, designed for scale, speed, and repeat play.
