

## GET LUCKY GOLF × GLOBAL MARKET SCENARIOS

*Market potential & revenue scenarios · August 2026*

**The thesis in one line.** The plan to 2032 needs 14,061 paying subscribers organizing ~39,400 active players; golf has 160 million and the category's leading free app reports 10m+ golfers. Simulators are in the forecast; peer stakes are counted at zero, permanently.

### The market in four numbers

|                                |                                                                                                                                                                                         |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>160M+ golfers worldwide</b> | 112.2M adults and juniors outside the US & Mexico <sup>1</sup> plus 48.1M in the US <sup>2</sup>                                                                                        |
| <b>38,000+ courses</b>         | Across 206 of the world's 251 countries <sup>3</sup> — every par-3 a potential Get Lucky hole. Key markets: UK 3,101 · Germany 1,050 · France 804 courses <sup>3</sup>                  |
| <b>\$1.2bn insurance layer</b> | Hole-in-one / prize-indemnity insurance today, projected to \$2.4bn by 2033 (8.1% CAGR from a 2024 base) — 8.1% CAGR off a 2024 base <sup>4</sup> — with no consumer brand on top of it |
| <b>1 in 12,500</b>             | Amateur odds of a hole-in-one <sup>5</sup> — every attempt worth paying for, every prize insurable                                                                                      |

### From market to plan

| Funnel step                                             | Size                                              |
|---------------------------------------------------------|---------------------------------------------------|
| Golfers worldwide (incl. US)                            | <b>160M+</b>                                      |
| Company scenario — four launch regions (US, EU, SA, JP) | <b>~950,000 subscribers</b>                       |
| Scenario revenue potential across those regions         | <b>\$21m+ / year</b>                              |
| The plan to 2032                                        | <b>14,061 subscribers · 39,371 active players</b> |
| The December 2029 milestone                             | <b>7,398 subscribers · ~20,700 active players</b> |

## Revenue scenarios — from the pro forma workbook

72-month model from January 2027, subscribers from zero, churn at 5.5%/month — deliberately worse than the previous plan. Peer money in play is a KPI, not revenue: Get Lucky takes no share of players' stakes, permanently. Prize payouts are excluded throughout — that risk sits with the insurer, and the 24% premium is collected on the same swing that creates it.

|                                  | 2027                | 2029 — 3-year plan | 2032 — exit vision |
|----------------------------------|---------------------|--------------------|--------------------|
| Subscribers closing              | 3,436               | 7,398              | 14,061             |
| Active players                   | 9,620               | 20,714             | 39,371             |
| Peer money in play revenue: zero | \$0.7m              | \$2.2m             | \$4.3m             |
| Subscriptions                    | R4.4m               | R14.2m             | R28.1m             |
| Insured jackpot net 66%          | R2.8m               | R9.2m              | R18.2m             |
| Installed courses net 66%        | R1.5m               | R3.5m              | R6.4m              |
| Simulators live 2027             | R2.4m               | R12.0m             | R32.0m             |
| Territory sponsorship            | R3.0m               | R5.5m              | R12.5m             |
| Total revenue                    | <b>R14.1m</b>       | <b>R44.4m</b>      | <b>R97.2m</b>      |
| Total cost                       | R12.9m              | R33.7m             | R71.0m             |
| EBITDA margin                    | 8.7%                | 24.1%              | 26.9%              |
| Revenue multiple applied         | 3.77× (implied)     | <b>3.00×</b>       | <b>3.00×</b>       |
| Valuation milestone              | R53.3m (this round) | R133.1m (2.50×)    | R291.6m (5.47×)    |

Every forward milestone is struck at a flat 3.0× revenue. There is no listed comparable for an insured skill-prize platform, so the multiple is set against what can be evidenced rather than borrowed from consumer-subscription names; the round itself implies 3.5×, so the multiple compresses as the company scales. Revenue is reported by stream throughout so the composition of the business is legible at every milestone. FX 18.5. Full monthly build in the pro forma workbook; the simulator adoption range is in the simulator document.

## The peer layer — the engine we never monetise

**FREE FOREVER — NO RAKE, NO PER-GAME FEE, NO CUSTODY**

Skins, nassau, dots and team games between the fourball, with a live ledger and netted settlement. The fourball verifies its own results — including closest-to-the-pin and longest drive — and Get Lucky adjudicates nothing. Private bets between players are lawful precisely while no third party takes a fee or holds the pot, so Get Lucky takes nothing, permanently: peer money in play (~\$2.2m in 2029) appears in the model as an engagement KPI with revenue of zero. It is the reason the app is opened every Saturday — and the context in which the subscription and the group-pooled jackpot are sold.

## Revenue stream 3 — Territory sponsorship: the deal we already signed

**SOUTH AFRICA CONTRACTED — REPEATED AT EACH MARKET ENTRY**

Sponsorship is the one line in this plan that was signed rather than forecast. **Santam committed R9m over three years** (R2.5m → R3.0m → R3.5m) to be attached to the product in South Africa — a market of roughly 150,000 golfers. The logic is structural: the insurer who underwrites the prize is the natural sponsor of it. That is why the deal was signable in a small market, and why it repeats in large ones.

| Territory     | Anchor partner                                   | From | 2029                                                             | 2032         |
|---------------|--------------------------------------------------|------|------------------------------------------------------------------|--------------|
| South Africa  | Santam (Authorised FSP 3416) — <b>contracted</b> | Live | R9m over three years, held flat at the R3.5m run-rate after 2028 |              |
| United States | Anchor insurer partner — appointed at entry      | 2029 | R2.0m                                                            | R4.0m        |
| Europe        | Anchor insurer partner — appointed at entry      | 2030 | —                                                                | R3.0m        |
| Japan         | Anchor insurer partner — appointed at entry      | 2031 | —                                                                | R2.0m        |
| In the plan   |                                                  |      | <b>R2.0m</b>                                                     | <b>R9.0m</b> |

Every new-territory figure is set *below* the South African run-rate at entry, in markets many times its size — sponsorship is negotiated and lumpy, and a linear scale off golfer counts would produce numbers no sponsor would sign. New-territory partners are appointed as each market opens and are not yet in place. Live inputs on the Sponsorship tab of the pro forma workbook.

## Growth engine 1 — Golf travel: the download engine

**IN DEVELOPMENT — NOT YET CONTRACTED**

An ace on tour refunds the whole trip, insured. Operators pay ~\$1 per booked golfer to offer it — and every travelling golfer installs the app to play.

|                     |                                                                                                                                         |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Golf tourism market | ~\$28bn (2025), projected to ~\$62bn by 2034 <sup>6</sup>                                                                               |
| Travelling golfers  | 12M+ Americans travelled to play golf in each year 2022–2025 <sup>7</sup> ; Golfbreaks alone sends ~220,000 golfers a year <sup>8</sup> |
| Year-1 target       | <b>200,000+ app installs</b> (company target)                                                                                           |

The \$1 fee is not the prize — **distribution is**. Every install is a golfer one tap from the \$10/month global subscription; the travel hook is a funnel, not a revenue line.

## Revenue stream 4 — Simulators: the global multiplier

**LAUNCHING 2027 — FUNDED BY THIS ROUND**

A \$1 in-sim challenge for a \$1,000 insured prize, built into the operator's software. No hardware, no cameras, no installation — the sim itself is the verifier. It is the fourth rung of the model and carries

**R12.0m of revenue by 2029 and R32.0m by 2032** — roughly a quarter of group revenue on 1.5% of a single country. Travel and cross-sport remain excluded.

|                                |                                                                                                                                                            |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Global simulator market</b> | ~\$2.4bn (2025), projected to ~\$4.8bn by 2035 <sup>9</sup>                                                                                                |
| <b>South Korea alone</b>       | ~94M simulator rounds a year <sup>10</sup> ; a \$1.6bn screen-golf industry across ~9,000 venues <sup>11</sup>                                             |
| <b>United States</b>           | 19M Americans played exclusively off-course (simulators, ranges, golf entertainment) in 2025 <sup>2</sup>                                                  |
| <b>Leading operators</b>       | Golfzon (6,500+ venues, ~60% of the commercial market <sup>12</sup> ) · Trackman · Full Swing · Foresight Sports · X-Golf · Topgolf Swing Suite · Kakao VX |

## How the revenue is built

|                             |                                                                                                                                                                                                                                               |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Unit</b>                 | \$1 entry · \$1,000 insured prize · split <b>46 / 30 / 24</b> (Get Lucky / operator / insurer). The operator takes more than a course's 10% because it brings the venues, the software and the distribution — Get Lucky installs no hardware. |
| <b>Volume basis</b>         | Attach rate against <b>South Korea's ~94M annual simulator rounds alone</b> <sup>10</sup> . Golfzon's venues outside Korea and every other operator listed above are excluded.                                                                |
| <b>Ramp</b>                 | 2026 integration year (no revenue) · 0.3% (2027) · 0.8% (2028) · <b>1.5% (2029)</b> · 4.0% (2032)                                                                                                                                             |
| <b>Revenue to Get Lucky</b> | R2.4m (2027) · R6.4m (2028) · <b>R12.0m (2029)</b> · R32.0m (2032), software-only, delivery cost carried in the plan                                                                                                                          |
| <b>Funding</b>              | 20% of the R8.0m raise (~R1.6m) is allocated to the integration work this channel requires                                                                                                                                                    |

## Adoption range — the 2029 milestone at three attach rates

| Attach rate                   | Simulator revenue | Total revenue | Valuation (3.0×) | Investor multiple |
|-------------------------------|-------------------|---------------|------------------|-------------------|
| <b>0.5% — conservative</b>    | R4.0m             | R36.4m        | R109.1m          | 2.05×             |
| <b>1.5% — the plan</b>        | R12.0m            | R44.4m        | R133.1m          | <b>2.50×</b>      |
| <b>3.0% — strong adoption</b> | R24.0m            | R56.4m        | R169.1m          | 3.17×             |

Investor multiple measured on the R53.3m post-money of this round. Simulator revenue depends on concluding operator agreements, which are not yet signed.

**The Ernie route to market.** Ernie Els has direct relationships with the operators on that list and opens the door himself — his standing in the game, his course-design network and The Els Club venues reach people an unknown start-up cannot. That is direct access, not a contract, and the model treats it as such.
